About AARONVIO

Strategy, Governance, Security, Results.

Aaronvio is a boutique technology governance and management consultancy, led by industry experienced leaders with 20+ years of experience that helps organizations turn compliance obligations, security risk, IT complexity, and digital transformation into measurable business outcomes.

From strategy to execution, certification to continuous improvement, we partner with you across the full journey - delivering practical solutions that create trust, efficiency, and lasting impact.

We Don't just advise. We deliver.

01 Senior Expertise

Direct access to
experienced leaders

02 Faster Impact

Quick mobilization,
clear outcomes

03 Practical Solutions

Designed for real
business operations

Industries We Serve

Banking & Financial
Services
E-commerce & Retail

Free Zones & Regulatory
Authorities
Logistics & Supply Chain

Technology & Shared
Services
Construction

Government & Public
Sector
Real Estate

Our Vision

Our Mission

We exist to close the gap between policy and performance. Our vision drives where we are going. Our mission defines how we serve today.

*Practical governance.
Stronger security.
Measurable results*

That's Aaronvio.

OUR VISION

To be the trusted execution partner that organizations turn to when governance, risk, and technology need to move from paperwork to performance.

OUR MISSION

We turn governance, risk, technology, and transformation complexity into measurable business outcomes — giving organizations of every size the practical partnership, speed, and accountability to move faster, safer, and smarter.

HOW WE WILL GROW

Diversified Client Base

Across sector and company sizes so no single relationship or industry defines us.

Technology Adoption

Staying ahead by guiding clients' digital transformation and adopting emerging tech like AI.

Regional Expansion

Growing coverage across the UAE and wider GCC markets.

Why AARONVIO

Our Promise to Clients.

Our values shape how we work and the outcomes we deliver. Aaronvio combines strategy, governance, security and execution to help organizations stay secure, compliant and future-ready-while optimizing costs and driving real business results.

We turn complexity into competitive advantage

Strategy Through Execution

We build the strategy and stay through implementation, certified and audit-one accountable partner across the journey.

Senior Practitioner Ownership

Every engagement is led by hands-on senior consultants with real-world operator experience.

Security-First Customer-Centered

Security and governance are never negotiable, designed around your business, not imposed on it.

Governance That Fits Operations

Frameworks and policies that your teams can adopt and follow, so they drive results, not sit on shelves.

Cost Optimization

Lean delivery and vendor consolidation that reduce total cost of compliance and IT operations.

Service Portfolio

Six pillars, one accountable partner.

Strategy, PMO & Technology Delivery

Align strategy, stand up PMO governance, deliver against ISO/IEC 20000-1.

02

AI Security & Governance

Inventory AI use cases, assign ownership, align to ISO/IEC 42001.

04

Cybersecurity, Cloud & Vendor Risk

Security and governance are never negotiable — designed around your business.

06

01

Digital Transformation

Automate, govern data, and deploy AI and agentic use cases through a guided 5-stage journey.

03

Governance, Risk & Regional Compliance

COBIT-aligned GRC connected to UAE PDPL and GCC-wide regulation.

05

Capability & Talent

Upskilling, recruitment, fractional leadership that sustains governance.

Our Service Portfolio

Our values shape how we work and the outcomes we deliver. Aaronvio combines strategy, governance, security and execution to help organizations.

Strategy, PMO & Technology Delivery

Strategy & Digital Transformation Advisory

Assess current-state IT maturity and define a technology strategy aligned to business objectives. Build multi-year transformation roadmaps, TOMs, and an Architecture Review Board (ARB).

PMO & Program Governance

Stand up or mature an EPMO/PMO model — prioritization, dashboards, reporting cadence. Chair governance forums (CAB, Steering Committees) and track benefits realization/ROI.

IT Service Management (ITSM)

Design ITSM processes aligned to ITIL4, with SLA and service-catalog definition. Prepare and maintain ISO/IEC 20000-1 certification through continuous improvement.

Offshore Delivery Center (ODC) Set-Up & Managed Delivery Teams

Design and stand up offshore/nearshore delivery centers with governance and quality gates. Manage transition and knowledge-transfer from in-house to ODC delivery models.

Our Service Portfolio

Digital Transformation

Five services, each deployable on its own — from opportunity assessment to autonomous workflows.

AI & Automation Opportunity Assessment

Build a scored inventory of automation and AI use cases; translate top candidates into a business case and roadmap.

Process Automation & Intelligent Process Automation (RPA/IPA)

Automate high-volume processes via RPA, then cognitive automation for unstructured inputs. Flag process-redesign candidates for business-led remediation.

Data Governance & Business Intelligence Enablement

Design data governance frameworks — ownership, classification, access control. Build Power BI/dashboard reporting; deep data engineering is scoped through a vetted partner.

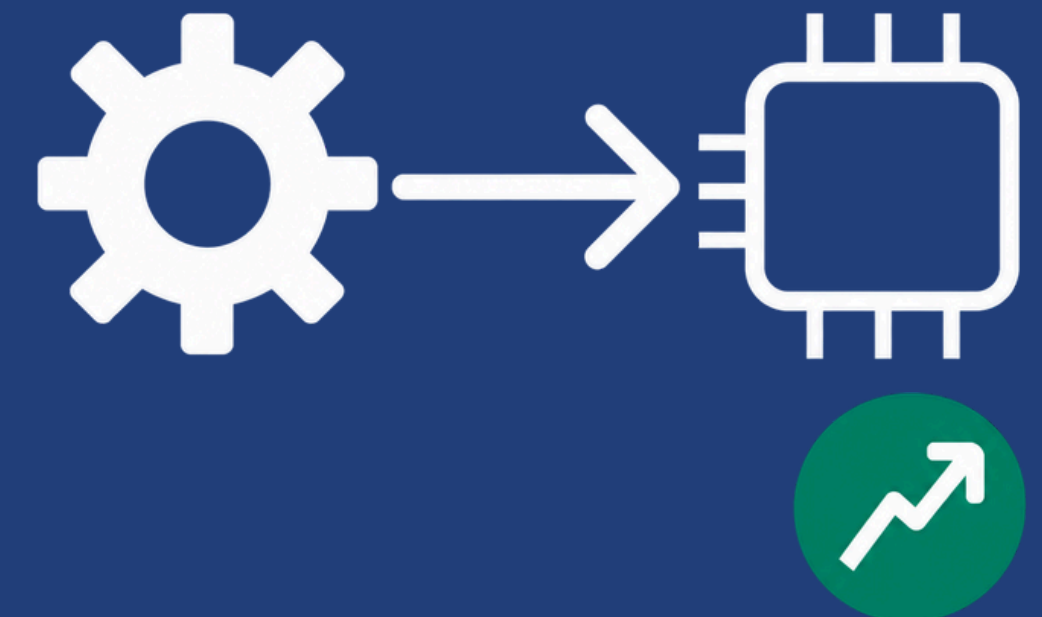

Generative AI & Conversational AI (Chatbots) Enablement

Run GenAI pilots and build AI chatbots on existing, leading AI models — not custom development — deployed on governed data.

Agentic AI & Autonomous Workflow Orchestration

Design and deploy multi-step autonomous workflows on existing agentic platforms and leading AI models, with clear guardrails and human checkpoints.

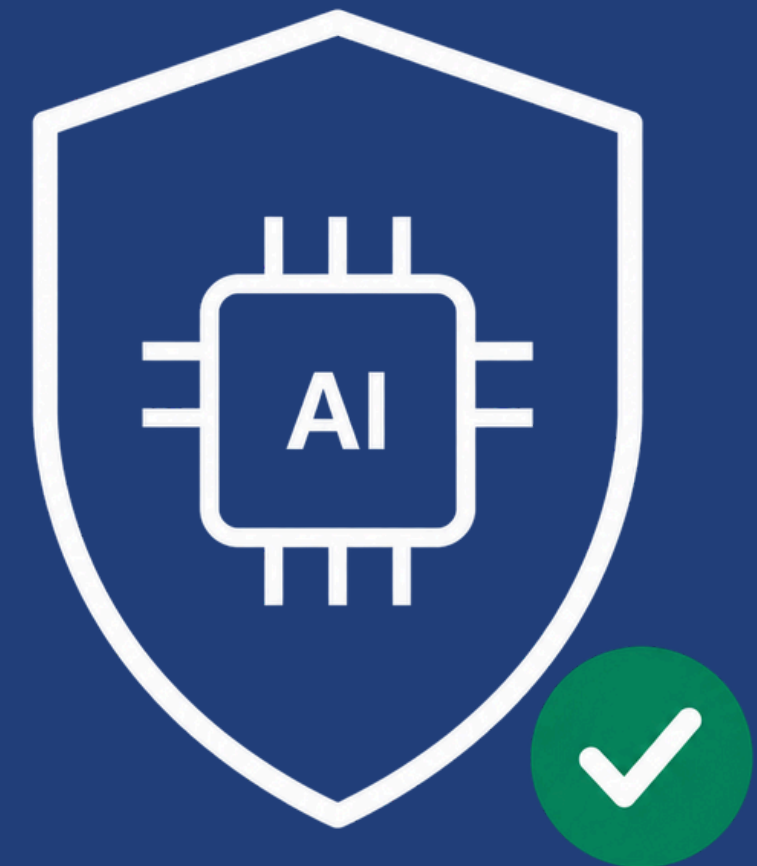

Our Service Portfolio

AI Security & Governance

Governing AI before it governs you.

- Inventory AI/RPA use cases across the business and assess risk, ownership and control requirements for each.
- Define Responsible AI policy, risk gates, and a governance operating model aligned to ISO/IEC 42001.
- Embed governance review into the AI delivery lifecycle, and provide ongoing AI risk reporting and control assurance to leadership and risk committees.

Built to align with: ISO/IEC 42001, the international standard for AI management systems — structured to anticipate UAE and GCC AI-specific regulation as it develops.

Our Service Portfolio

Governance, Risk & Regional Compliance

Governance, Risk & Compliance (GRC)

Design and implement COBIT 2019-aligned IT governance frameworks with defined KPIs. Develop policy/standard/procedure libraries and deploy e-GRC compliance automation.

Regional Regulatory Compliance

Advise on UAE PDPL and the Cyber Security Council's Information Assurance Standard. Advise on GCC-wide frameworks (SAMA, NCA, DESC/ADHICS, DIFC-ADGM, CBB); run readiness assessments.

Built to align with: COBIT 2019, UAE PDPL, and the UAE Cyber Security Council's Information Assurance Standard, alongside SAMA, NCA, DESC/ADHICS, DIFC-ADGM, and the CBB.

Our Service Portfolio

Cybersecurity, Cloud & Vendor Risk

Information & Cyber Security Governance

Lead ISO/IEC 27001 (ISMS) scoping, gap assessment and certification; assess cyber risk against NIST CSF and prepare for SOC 2 readiness. Stand up or mature a Cyber Fusion Centre / SOC function for threat monitoring and incident response.

Vendor Management & Commercial Governance

Assess the vendor landscape for consolidation and conduct third-party risk assessments (TPRM), embedding GRC/InfoSec clauses in contracts. Stand up a Vendor Management Office (VMO) to govern SLAs, spend and renewals centrally.

Cloud & Emerging Tech Governance

Establish a Cloud Center of Excellence (CCoE) and implement FinOps practices for cost visibility, optimization and chargeback. Deploy CSPM tooling for continuous cloud security posture monitoring.

Security Testing Services

Conduct penetration testing across infrastructure, applications and cloud environments, plus AI/LLM red-teaming for prompt-injection and data-leakage risk. Provide remediation guidance and retesting to close identified vulnerabilities.

Our Service Portfolio

Capability & Talent

Technology Training & Capability Building

Design certification tracks and role-based upskilling programs across IT and security domains. Deliver customer-centricity and process-maturity training tied to measurable KPIs, plus governance and security-awareness workshops for client teams.

Tech Recruitment & Resource Augmentation

Source technology talent for contract, project or permanent placement, and provide fractional/interim leadership for IT, security and governance roles. Support workforce planning and capacity modeling for client technology teams.

Security Awareness & Human Risk Management

Deliver phishing simulation and security-awareness training campaigns, tracking susceptibility through measurable metrics. Provide ongoing human-risk reporting to leadership and risk committees.

Partner & Product Ecosystem

Selected partners and platforms that extend our advisory delivery.

Security Testing

Obsidio is a Swiss-built DDoS resilience testing platform trusted by leading Swiss banks. Built on a global network of 270,000 real hardware devices — 40,000 of them reserved for Obsidio testing — to simulate authentic attack patterns, it lets teams test and validate their defenses on demand, producing cryptographically attested, audit-ready reports aligned with FINMA, DORA, and NIS2. Aaronvio delivers Obsidio as part of our regional cyber-resilience and compliance-testing offering, giving GCC banks and regulated institutions Swiss-grade DDoS validation without needing an in-house red team.

AppCheck is a UK built DAST and infrastructure vulnerability scanning platform, created by expert penetration testers and rated 9.8 out of 10 on G2. Using a first principles approach backed by hourly VulnFeed updates, it tests web applications, APIs, single page applications and internal and external infrastructure against zero days and more than 100,000 known security flaws, safely exploiting findings to eliminate false positives and deliver proof of concept evidence. Aaronvio delivers AppCheck alongside Obsidio as part of our Security Testing practice, giving organisations in the UAE, KSA, Bahrain and Pakistan continuous, enterprise grade vulnerability scanning with local onboarding and remediation guidance from our own team.

Partner & Product Ecosystem

Selected partners and platforms that extend our advisory delivery

Security Awareness & Human Risk Management

HumanFirewall

HumanFirewall (Infosec Ventures) is a human-risk management platform used in 142+ countries, combining phishing simulation, adaptive gamified training, and role-based risk scoring in one console.

It integrates natively with Microsoft 365 and Google Workspace for automated remediation, turning security-awareness training into a continuously measured program rather than an annual compliance exercise.

Aaronvio delivers HumanFirewall as a fully managed security-awareness program, backed by our own GRC advisory.

Cloud FinOps & Cost Optimization

Surveil. Streamlining Visibility

Surveil is a cloud financial-management and cost-optimization platform giving unified visibility across Azure, AWS, Google Cloud, Oracle Cloud, and Microsoft 365/Copilot spend — one airline customer used it to identify over AED 2.7 million (\$550,000) in licensing savings for a single renewal cycle.

It deploys agentlessly via secure, read-only APIs with no infrastructure changes required, typically surfacing actionable insights within hours or days rather than weeks.

Surveil itself holds SOC 2 Type II, ISO 27001:2022, ISO 27701, and ISO 42001 certifications, and Aaronvio delivers it as part of a broader cloud governance and cost-optimization advisory for regional clients.

Partner & Product Ecosystem

Selected partners and platforms that extend our advisory delivery

Compliance Automation & Trust Management

Vanta is the market-leading trust-management platform automating continuous compliance across 35+ frameworks (SOC 2, ISO 27001, GDPR, HIPAA, PCI, and more), used by 16,000+ organizations to compress audit prep from months to weeks and cut out manual evidence-chasing.

It integrates directly with your existing cloud, identity, and business tools, testing controls continuously rather than once a year, and reuses evidence across overlapping frameworks to speed up every certification after the first.

Aaronvio delivers Vanta as a fully managed compliance-automation program — platform setup, integration, and audit-readiness reporting — backed by our own GRC advisory.

NORA is SmartDev's AI-driven compliance and workflow-automation engine, purpose-built to take the manual effort out of continuous compliance — in SmartDev's own SOC 2 enablement work it has cut incident response time by 80%, reached 100% audit-trail coverage, and brought SOC 2 readiness in up to 5x faster, going live in as little as 6 weeks.

Built by SmartDev, NORA runs inside the client's own VPC or on-premises infrastructure rather than a shared SaaS environment, so sensitive data never leaves the client's secured perimeter.

Aaronvio delivers NORA as part of a combined continuous-compliance and continuous-security-testing offering for regulated GCC clients, backed by our own GRC advisory.

Partner & Product Ecosystem

Selected partners and platforms that extend our advisory delivery

Cloud Security, Compliance & Governance

ProvisionPoint Premium and Audit are SnapOn Software's paired solutions for governing Microsoft 365 workspace lifecycles and continuously identifying access risk — ProvisionPoint automates provisioning, retention, and naming governance (cutting IT admin workload by up to 70%), while Audit assesses tenant health, guest access, and external sharing risk directly from Teams. Both are true SaaS, built and hosted on Microsoft Azure with no footprint installed in your tenant, ISO/IEC 27001:2022 certified (Certificate 23/3276), and available across EU, US, UK, Switzerland, Australia, and UAE data centers — access is granted via a one-time, fully revocable Azure AD consent that never requires Global Admin privileges. Aaronvio delivers ProvisionPoint Premium and Audit together as a combined M365 governance-and-audit-trail offering, backed by a structured multi-week onboarding methodology and our own GRC advisory for regional regulatory alignment.

ProjectSOS is SnapOn Software's industry-specific **NetSuite** solution for project billing, job costing, and revenue recognition — built for project-based businesses across AEC/construction, creative, and engineer-to-order (ETO) verticals. It extends NetSuite's core financials with project-level cost tracking and milestone-based revenue recognition, giving finance teams accurate job profitability without bolting on a separate PSA system. Aaronvio delivers ProjectSOS alongside ProvisionPoint Premium and Audit as part of a single SnapOn engagement, pairing M365 governance with project-financial control under one partner relationship.

Partner & Product **Ecosystem**

Selected partners and platforms that extend our advisory delivery.

Third-Party Risk Management Solution

SecurityRating.com

SecurityRating.com (Infosec Ventures) gives continuous, ratings-based visibility into third-party and vendor cybersecurity posture, replacing point-in-time questionnaires with ongoing, outside-in monitoring across the supply chain.

It scores vendors much like a credit bureau scores counterparties, flagging deteriorating security postures before they turn into incidents and giving procurement and risk teams a shared, evidence-based view of exposure.

Aaronvio delivers SecurityRating.com as part of a broader third-party and vendor-risk management program, backed by our own GRC advisory.

Email Authentication & Domain Security Solution

EmailAuth[®]
EMAIL AUTHENTICATION AS A SERVICE

EmailAuth.io (Infosec Ventures) implements and manages DMARC, SPF, DKIM, and BIMI for a domain, closing the email-spoofing gap that sits outside most ISMS and security-testing scopes.

It is recognized by the Global Cyber Alliance, and moves a domain from monitor-only to full enforcement in staged steps, so legitimate mail is never blocked along the way.

Aaronvio delivers EmailAuth.io as part of our broader email and domain-security advisory, backed by our own GRC advisory.

How We Engage

A clear path from first conversation to measurable results.

Delivery Model

Discovery Call

Understand your priorities, constraints, and current state - no obligation.

Scoping & Proposal

A clear, fixed-scope proposal defining deliverables, timeline, and investment.

Delivery

Senior-led execution from day one, with regular checkpoints against agreed milestones.

Assurance & Handover

Certification, sign-off, or steady-state handover, with knowledge transfer to your team.

Ways to Engage

Project-Based

Fixed-scope engagement for a specific outcome (e.g., ISO certification, PMO stand-up, GRC framework build).

Retainer

Ongoing advisory support for continuous governance, risk, and compliance needs.

Fractional / Leadership

vCISO, Interim PMO Lead, or fractional governance leadership embedded in your team.

TURN RISKS TO RESULTS.

Whether you need a single ISO certification delivered, a PMO stood up in weeks, or a full governance transformation - we're ready to help.

Ready to get started

Book a Discovery Call with our experts and take the first step toward measurable results.
